#####
# COMMANDS.CFG - SAMPLE COMMAND DEFINITIONS FOR NAGIOS 4.5.10
#
#
# NOTES: This config file provides you with some example command definitions
# that you can reference in host, service, and contact definitions.
#
# You don't need to keep commands in a separate file from your other
# object definitions. This has been done just to make things easier to
# understand.
#
#####
#
# SAMPLE NOTIFICATION COMMANDS
#
# These are some example notification commands. They may or may not work on
# your system without modification. As an example, some systems will require
# you to use "/usr/bin/mailx" instead of "/usr/bin/mail" in the commands below.
#
```

```

ubuntu@puppet-master: ~
  command_name    check_local_mrtgtraf
  command_line    $USER1$/check_mrtgtraf -F $ARG1$ -a $ARG2$ -w $ARG3$ -c $ARG
4$ -e $ARG5$
}

#####
# NOTE: The following 'check_...' commands are used to monitor services on
#       both local and remote hosts.
#####
define command {
  command_name test_failure
  command_line $USER1$/check_dummy 2 "Production test: simulated CRITICAL"
}

define command {

  command_name    check_ftp
  command_line    $USER1$/check_ftp -H $HOSTADDRESS$ $ARG1$
}

define command {

```

```

ubuntu@puppet-master: ~

Practical-3: Production-Grade Custom Nagios Plugin Development

The screenshot shows a terminal window titled 'ubuntu@puppet-master: ~'. The terminal is running GNU nano 6.2, editing a file at '/usr/local/nagios/libexec/vishnus_app'. The script content is as follows:

```
#!/bin/bash  
  
process="nginx"  
  
if pgrep -x "$process" > /dev/null  
then  
    echo "Process - $process is running OK"  
    exit 0  
else  
    echo "Process - $process is not running CRITICAL"  
    exit 2  
fi
```

At the bottom of the terminal, there is a status bar with the text '[Read 12 lines]' and a series of keyboard shortcuts: ^G Help, ^O Write Out, ^W Where Is, ^K Cut, ^T Execute, ^C Location, ^X Exit, ^R Read File, ^_ Replace, ^U Paste, ^J Justify, and ^_ Go To Line.

```
ubuntu@puppet-master: ~
GNU nano 6.2 /usr/local/nagios/etc/objects/commands.cfg
# The check must result in a 100% packet loss or 5 second (5000ms) round trip
# average time to produce a critical error.
# Note: Five ICMP echo packets are sent (determined by the '-p 5' argument)

define command {
    command_name    check-host-alive
    command_line    $USER1$/check_ping -H $HOSTADDRESS$ -w 3000.0,80% -c 5000.0
}

define command {
    command_name    vishnus_custom_app
    command_line    $USER1$/vishnus_app
}

NGINX is running fine with the current threshold

```
ubuntu@puppet-master: ~
Checked 1 contacts.
Checked 1 contact groups.
Checked 27 commands.
Checked 5 time periods.
Checked 0 host escalations.
Checked 0 service escalations.
Checking for circular paths...
Checked 1 hosts
Checked 0 service dependencies
Checked 0 host dependencies
Checked 5 timeperiods
checking global event handlers...
Checking obsessive compulsive processor commands...
Checking misc settings...

Total Warnings: 0
Total Errors: 0

Things look okay - No serious problems were detected during the pre-flight check
ubuntu@puppet-master:~$ sudo systemctl reload nagios
ubuntu@puppet-master:~$ sudo systemctl stop nginx
ubuntu@puppet-master:~$ curl -I http://localhost:8080
curl: (7) Failed to connect to localhost port 8080 after 0 ms: Connection refused
ubuntu@puppet-master:~$
```

Have stopped NGINX let's see if Nagios catches it

There we go Nagios never disappoints

```

ubuntu@puppet-master: ~
GNU nano 6.2 /usr/local/nagios/etc/objects/commands.cfg

define command {
    command_name vishnus_custom_app
    command_line $USER1$/vishnus_app
}

define command {
    command_name check_nginx_http
    command_line $USER1$/check_nginx_http $ARG1$ $ARG2$ $ARG3$
}

#####
#
# SAMPLE SERVICE CHECK COMMANDS
#
# These are some example service check commands. They may or may not work on
# your system, as they must be modified for your plugins. See the HTML
